

The Epiwave Wrinkle Rx

It's all about collagen!

When we are young, collagen formation keeps skin looking smooth and taut like a sheet stretched over a firm mattress. As we age, free radical damage and inflammation increase the synthesis of collagenase (a bad enzyme) that breaks down collagen. The end result is the caving in of the mattress and visible wrinkling and sagging of the sheet!

Recipe for a morning and evening facial "cocktail"

1 drop of **Age Reversal Peptide Serum** (*firms the mattress*)

1 drop of **Hexapeptide Superboost Serum** serum (*works like Botox*)

1 drop of **Collagen Strengthening Serum** (*keeps collagen from breaking down, and keeps skin from aging*)

In the morning, finish with **Intensive Moisture Cream**

In the evening, finish with **Vitamin E & Squalane Serum**
